

“Standing Guard over Health, Safety, & Wellness”

# Monitoring Program

The Green Umbrella® Health Sentinel LifeCycle™ System assesses, monitors, and solves common architectural concrete floor issues by employing a root-cause approach **executed on** the pillars to **Analyze, Prescribe, and Audit**, safeguarding your **Health, Safety, and Wellness**.

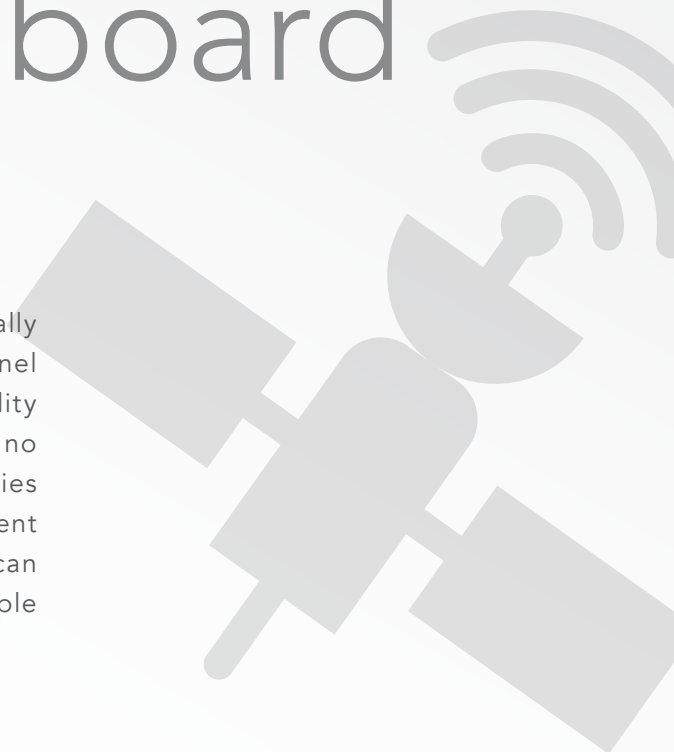

# Connected

Facility managers can now stay connected to the **Health, Safety, and Wellness** of their floors as easily as they connect to friends and family with a mobile devices. Twenty-four-hour connectivity empowers facility managers to proactively monitor their facility instead of reacting after a serious floor issue's strike. Sentinel's monitoring devices communicate wirelessly using standard power. The secure cellular connection does not need Wi-Fi and provides uninterrupted data transmission.

# Global Dashboard Monitoring

Health Sentinel Monitoring delivers real-time data on a globally accessible dashboard. The activities and timeline of personnel performance can be confirmed, providing confidence to facility management of cleaning performance and efficiency. You no longer need to send out multiple employees to assess facilities and data. Dual verification streamlines the replenishment process and eliminates errors. One person, from one device, can access geo-relevant maintenance and supply data from multiple facilities, streamlining product ordering and logistics.

# Monitoring

## Start Time

### **Timestamp recording when personnel start dispensing treatment**

How do you know when work begins? Maintain operational oversight of facility maintenance by knowing the exact time personnel start dispensing cleaning products. Staying informed helps you understand the amount of time maintenance staff is using cleaning your facilities, allowing for data-led facility maintenance decisions.

## Frequency

### **Monitor how often treatment is dispensed**

Can you track the duration of work? Tracking how often treatment is dispensed lets you know how well the maintenance staff is sticking to your cleaning schedule. Frequency data can assist in ensuring that your facility is maintained at the highest level of cleanliness, aid management in evaluating the effectiveness of its cleaning schedule, and serve as a basis for employee commendation.

## Usage

### **Confirm the right amount of product is being used for the assigned square footage**

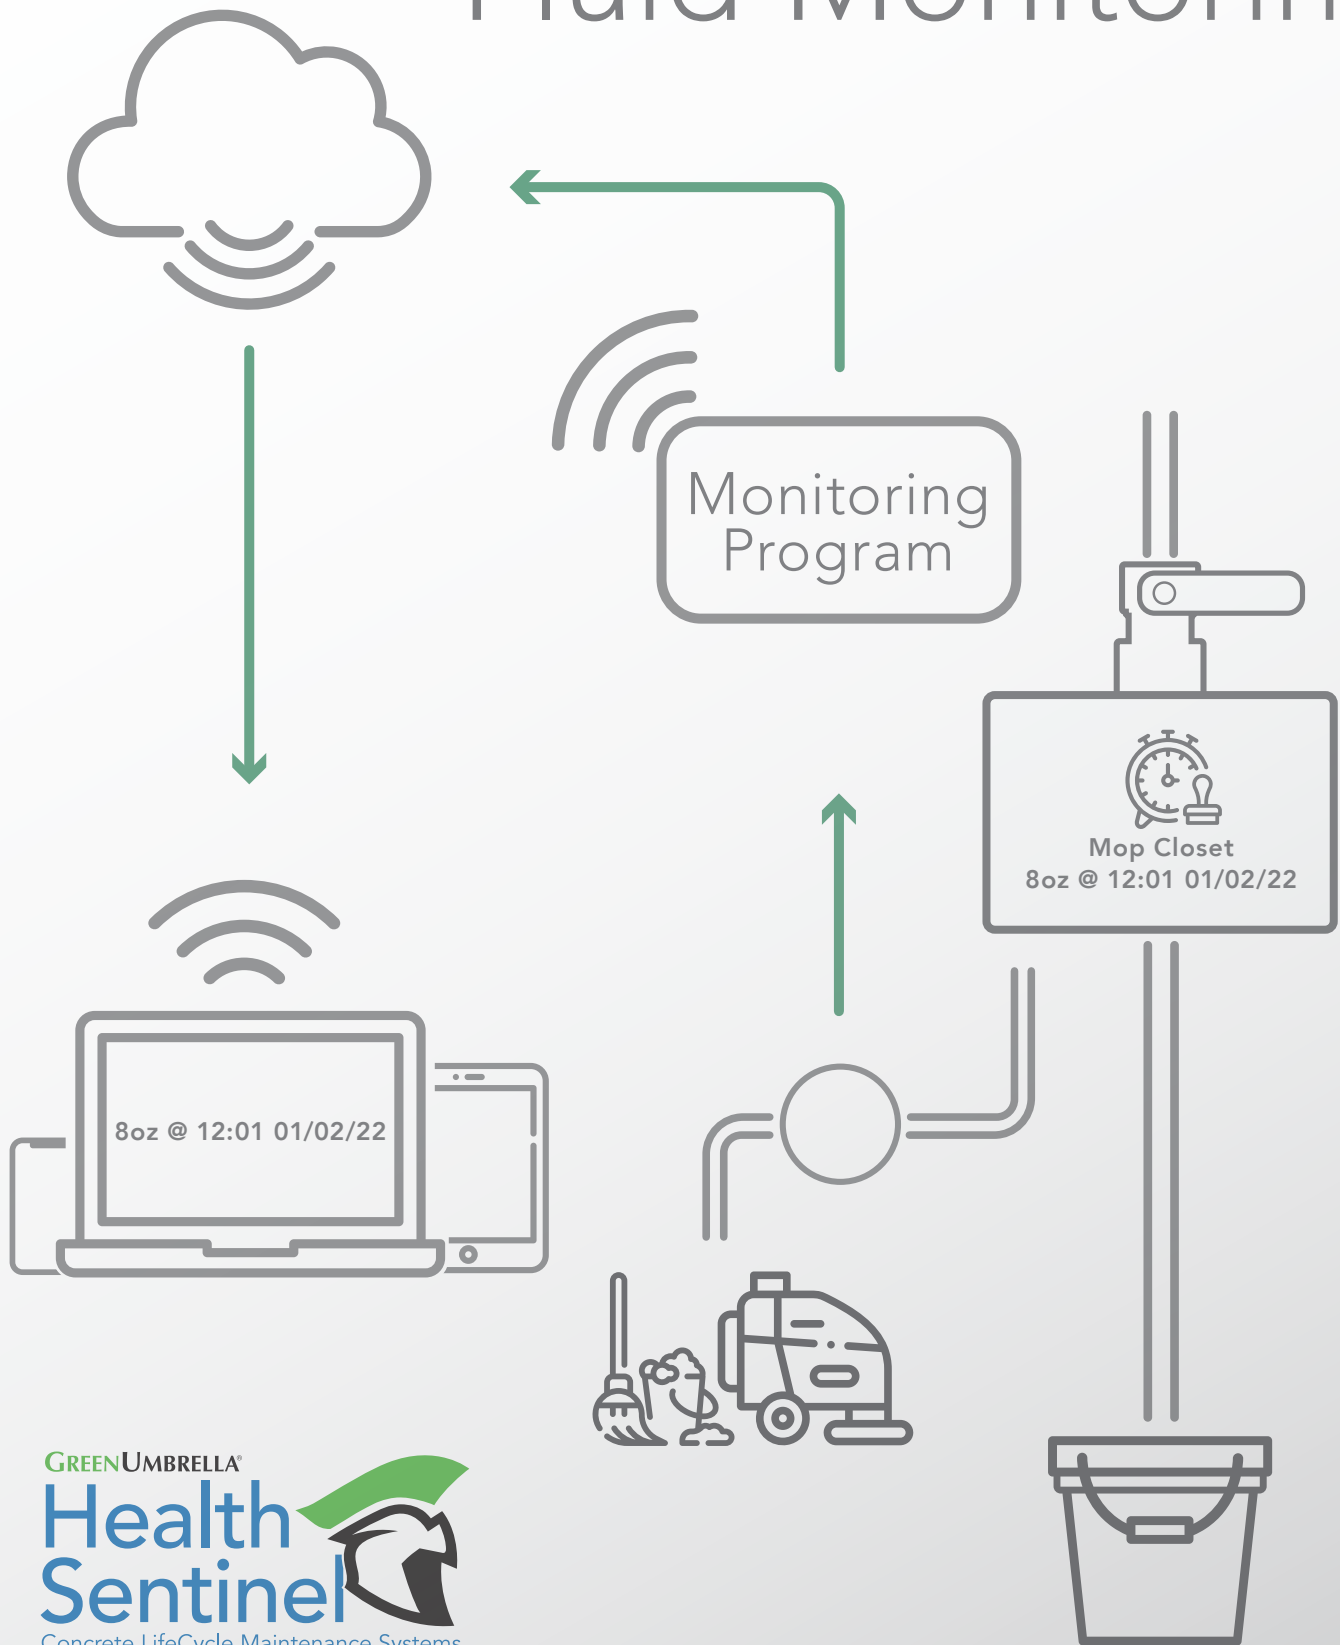

How do you know that your janitorial staff is cleaning the assigned area and using the right amount of product? Tracking their movements is time-consuming, expensive, and counterproductive. However, by monitoring the amount of Green Umbrella cleaning products used every day, you will have a clear picture of how much of the floor is being cleaned, how much product is being dispensed per square foot, and how frequently your maintenance staff is cleaning the floors.

## Re-stock

### **Know when to order more treatment.**

Is there a way to reduce communication with logistics companies? It's a challenge to manage a cleaning calendar. Multiple facilities, products, and cleaners need to be ordered and delivered on time. Our monitoring system takes the guesswork out of knowing when to restock, how much, and what location. When do you order? At the time indicated by our monitoring system.

# Connected Fluid Monitoring

***“GIVING YOU THE DIRECTION YOU NEED.”***

**CUT YOUR LABOR    CUT YOUR DOWNTIME    CUT YOUR ENVIRONMENTAL IMPACT**

*“Green Umbrella’s product branding is the direct PRODUCT message “Cut to the Chase”. Each product and installation are driven a goal: **Cut your Labor. Cut your Downtime. Cut your Environmental Impact.** Green Umbrella quickly isolates these key benefits to explain the profitable, sustainable and quality of our industry unique products.”*
