

“Standing Guard over Health, Safety, & Wellness”

The Green Umbrella® Health Sentinel LifeCycle™ System assesses, monitors, and solves common architectural concrete floor issues by employing a root-cause approach **executed on the pillars to Analyze, Prescribe, and Audit**, safeguarding your **Health, Safety, and Wellness**.

- Deter Immediate and Potential Threats to Floor’s Lifecycle
- Analysis & Audit with Quantifiable Performance Measurements
- Increase Surface Sanitation & Safety
- Improved Facility Reputation for HSW
- Championing Floor Tech Value & Performance
- Monitored Prescription Usage
- Expense Reduction with Automatic Supply Monitoring

Analyze

Understand your floor's condition and determine future outcome

Facility analysis through unique testing of your facility provides a variety of quantifiable metrics. Our team of professionals with field experience in concrete, custodial, and building wellness interprets the metrics, providing the knowledge needed to understand and create actionable prescriptions calculated to enhance future performance.

Prescribe

Translate analysis into an action plan

Translate decisions into educated action plans using selected Green Umbrella treatments, products and/or concrete systems to clean, condition, and protect your facility's concrete floors.

Audit

Monitor the prescribed action

Audits help our team review the results of the prescribed action and provide data for potential recommendations to refine future Green Umbrella systems solutions. This improves the durability and lifecycle of the concrete.
